

The Planning Policy sub-committee of Rochford District Council approved the following approach to the undertaking of environmental appraisal of policies within the Rochford District Replacement Local Plan at their meeting on 26th October 1999.

INTRODUCTION

- 1.1 The Government in *Planning Policy Guidance Note [PPG] 12 – Development Plans and Regional Planning Guidance*¹, states that environmental concerns need to be integrated into policy in all development plan preparations. Paragraph 5.52 of PPG12, states that *"Most policies and proposals in all types of plans will have environmental implications, which should be appraised as part of the plan preparation process."*
- 1.2 The Environmental Appraisal of the plan adopts guidance set out in *Environmental Appraisal of Development Plans: A Good Practice Guide*².

SUSTAINABLE DEVELOPMENT AND ENVIRONMENTAL APPRAISAL

- 1.3 PPG12 states with regard to this specific area:
- "The planning system and the preparation of development plans in particular, can contribute to the objectives ensuring that development and growth are sustainable. The sum of total decisions in the planning field, as elsewhere should not deny future generations the best of today's environment. This should be expressed through the policies adopted in development planning."*
- 1.4 One of the purposes of environmental appraisal is to provide a framework to ensure that environmental and sustainability concerns are integrated into the plan making process. The appraisal also enables negative impacts to be highlighted so that consideration can be given to potential mitigation of the adverse effects.

METHODOLOGY

- 1.7 Based on the Government's Good Practice Guide, the appraisal is divided into three main stages:

¹ Planning Policy Guidance Note 12 - Development Plans - Department of the Environment, Transport and the Regions (1999)

² *Environmental Appraisal of Development Plans: A Good Practice Guide* - Department of the Environment (1993)

1. An assessment of the scope of the plan against European, national and regional advice and guidance;
2. A testing of the compatibility and consistency of the policies in the Plan with the policies in the Essex and Southend Structure Plan and Regional Planning Guidance; and
3. An appraisal of the impact of the policies of the plan against environmental and sustainability criteria.

1.8 Each of the first three stages are described, as follows:

- a) **The Scope Of The Plan.** (In order to ensure that the Plan deals with all the significant environment sustainability issues contained within guidance and advice emerging from Europe, National Government and regional bodies, the contents of the plan will be compared with the guidance and advice received).
- b) **Compatibility and Consistency of Policies in the Plan with the Essex Structure Plan and regional planning guidance.**
- c) **Appraisal of Impact of Policies on the Environment and Implications for Sustainability.**
- d) **The methodology of this part of the appraisal involves assessing the impact of policies against significant aspects of the environment.**

1.9 In order to make the appraisal as manageable as possible the environment baseline is divided into 14 key environmental criteria against which the policies are judged to have impacts of varying significance. The *Good Practice Guide* states that:

"The identification of environment criteria allows environment factors to be used systematically across the planning areas and with other environmental bases, and allows the plan to be monitored."

1.10 The environment stock criteria are divided into three broad areas – local environmental quality, natural resources and global sustainability.

LOCAL ENVIRONMENT QUALITY

1.11 This category reflects the impact policies may have on the quality of people's lives and their surroundings.

A. Human needs

- Social facilities: housing, community, education etc.
- Quality of surroundings
- Economic aspects
- Equality of opportunity
- Safety

B. Urban Environment

- Settlement Form / Density/ Infrastructure.

C. Culture Heritage

- Historic buildings / Archaeological sites / Conservation Areas / Parks / Gardens
- Historic Natural features – Trees, Hedges, Woods
- Ancient Landscapes / Protected lanes
- Leisure / Tourism

D. Open Space / Access to Countryside

- Formal / informal
- Urban / rural
- Country Parks / Rights of Way / Amenity Recreation / Walking / Riding etc.

E. Environmental Health

- Local air quality / Smell / Noise
- Visual intrusion / light pollution

NATURAL RESOURCES

1.12 This category reflects the impact policies may have on the natural resources of the area.

F. Water Quality

- Pollution – ground water / Water supply
- Amenity Recreation / Fishing / Wildlife Rivers
- Lakes, Coasts etc.

G. Land Quality

- Agricultural soil / Contamination
- Waste disposal Dereliction
- Landscape / Reclamation
- Floodplains Coastal protection

H. Biodiversity

- Wildlife-fauna / floral Habitats-landscape / aquatic
- Designations
- Recreations / Education / Amenity

I. Minerals

- Reducing consumption
- Husbanding resources

GLOBAL SUSTAINABILITY

1.13 This category reflects the impact policies may have on global sustainability.

J. Energy – Transportation

- Reduce transport
- Increase public transport cycling, walking etc.
- Divert freight to water/rail

K. Energy / Other

- Energy conservation

L. Energy – Renewable

- Wind, biomass, solar etc.

M. Atmosphere

- Greenhouse gases
- CO₂ fixing (tree planting etc)

N. Natural Resources

- Fossil fuels (power generation / transport)
- Reduce use of non renewable raw materials

KEY QUESTIONS / INDICATORS

1.13 In order to carry out the appraisal a key question or questions need to be asked of each policy, in respect of each environment element. These then help indicate the scale of impact and whether it is likely to be positive, negative or neutral etc. The Key questions or Indicators used in the appraisal are set out in Table 1.

ENVIRONMENTAL BASELINE – THE SUSTAINABILITY REPORT

- 1.15 Information on the actual state of the environment i.e. baseline environment information was published in *The Sustainability Report for Essex*³ published in early 1999. This document contains 22 Sustainability Indicators, which will be used to measure change over time and should therefore prove helpful in determining the progress the county is making towards a sustainable future.

POLICY EVALUATION MATRIX

- 1.14 The principle tool in the appraisal process is the Policy Evaluation Matrix, which is used to look in broad terms at the overall impacts of policies on the environment. Local Plan policies form one axis of the matrix and the other comprises the 14 environment criteria.
- 1.15 The results of the appraisal are presented in summary matrices for each relevant chapter of the plan and are contained in Tables 2-13.
- 1.16 All of the policies in the Plan are looked at in relation to the 14 environmental criteria.
- 1.17 In order that the results are as meaningful as possible the aims of each policy will be summarized in the matrices. A brief commentary may also be given on the environmental sustainability issues raised in the appraisal of each policy.

TABLE 1 - ENVIRONMENTAL CRITERIA

GENERAL CRITERIA	INDICATORS OF POSITIVE IMPACT
Local Environmental Quality	
Human Needs	Does the policy improve the quality of life-i.e. increase / safeguard social facilities, surrounding or safeguard / increase employment opportunities?
Urban / Built Environment	Will the policy encourage use of brownfield sites and minimize use of greenfield sites? Will the policy encourage efficient use of land?
Cultural Heritage	Will the policy maintain, preserve, or enhance the cultural environment? Will the policy encourage the use of the cultural heritage or education, leisure and tourism?

³ *The Sustainability Report for Essex* - The Association of Essex Councils (1999)

TABLE 1 - ENVIRONMENTAL CRITERIA

GENERAL CRITERIA	INDICATORS OF POSITIVE IMPACT
Open Space / Access To The Countryside	Does the policy safeguard / enhance public open space or safeguard / increase access to the countryside?
Environmental Health	Will the policy lead to local quality of air being conserved / improved? Will the policy lead to a reduction of smell, noise, vibration or visual intrusion to the locality?
Natural Resources	
Water Quality	Will the policy result in quality and / or quantity of water being conserved / improved? Will the policy lead to reduction in water consumption or to provision of new sources? Will the policy protect amenity / recreation?
Land Quality	Will the policy result in land being conserved / upgraded, physically and / or visually? Will the policy lead to less waste being landfilled?
Biodiversity	Will the policy conserve/enhance stock of species and habitats?
Minerals	Will the policy result in quantity / rate of extraction decreasing? Will the policy safeguard resources for the future?
Global Sustainability	
Energy - Transportation	Will the policy reduce the number of journeys or lengths? Will the policy encourage diversion of freight from road to water / rail etc.? Will the policy encourage public transport, cycling, walking etc?
Energy – Other	Will the policy lead to a decrease in energy requirements (heat / light etc)?
Energy – Renewable	Will the policy encourage renewable energy production?
Atmosphere	Will the policy reduce emission of greenhouse gases? Will the policy retain / increase tree cover (CO2 fixing)?
Natural Resources	Will the policy demand for fossil fuels and non-renewable raw materials?

KEY FOR TABLES 2 - 13

✓✓	Significant positive impact on the environment	*	Potential negative impact mitigated by the particular policy
✗✗	Significant negative impact on the environment	★	Potential negative impact mitigated by other policies in plan / other plans
✓	Indirect, potential or minor positive impact	?	Unclear whether there will be a positive or negative impact.
✗	Indirect, potential or minor negative impact	=	Neutral impact – either positive and negative impacts counteract each other or no known impact
